Challenge 2 Worksheet

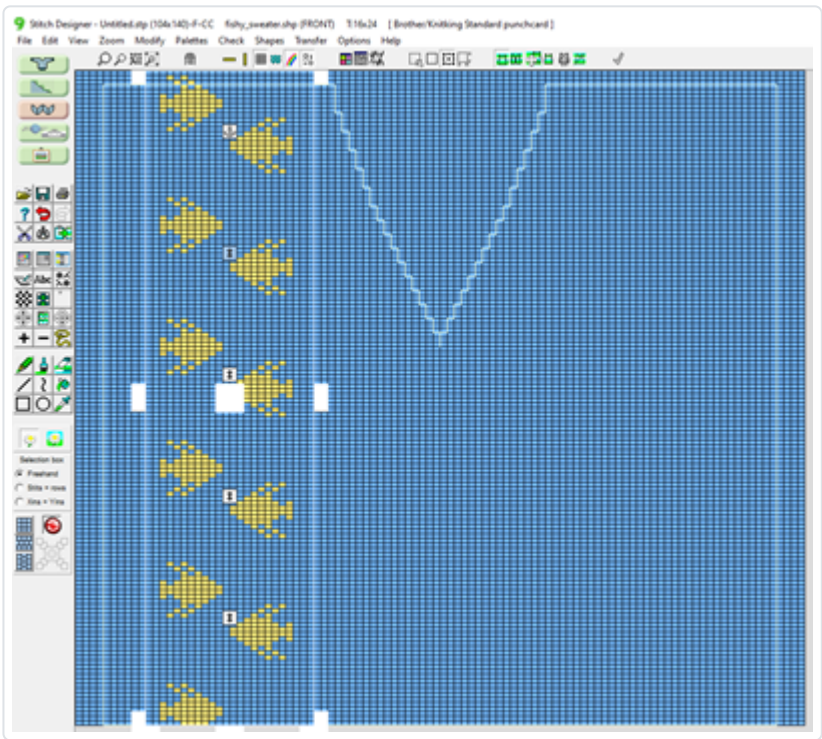

Create a new stitch pattern:

- If you have the pattern open from the previous exercise, use that pattern. If not, download and open the file "Fish Twins" stitch pattern file.
- Create a new stitch pattern to fit the front of the sample garment
- Set the size from the Fish Sweater Garment FRONT
- Open/create a clean palette with only the colors in use

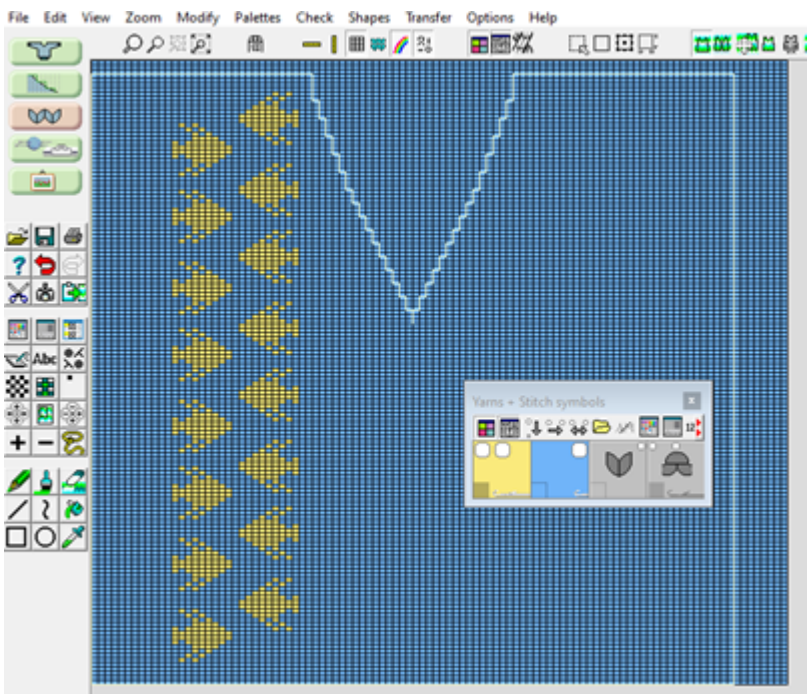

Import the fish:

- Import the Fish twins as a vertical border
- Position it in the center of the left shoulder
- **Don't permanently place it (leave the selection box active)**

Modify the imported design:

- Adjust the spacing of the fish as in the sample (bring them closer together)
- Permanently place the motif in position (turn off the selection box)
- Clean up any partial fish

This is just a large stitch pattern, you can edit as any other stitch pattern

Extra Credit:

Move the motif to the other shoulder WITHOUT using a selection box
